

ABSTRACT OF THE DISCLOSURE

Absorbent products and wet wipes are disclosed that are useful in reducing the amount of ammonia produced by bacteria on or near the skin or in bodily fluids such as urine. The products described herein contain an osmoregulation protector which when introduced into a bacteria-containing environment interacts with the bacteria and reduces the amount of ammonia produced by the bacteria without significantly affecting the growth rate of the bacteria. The osmoregulation protectors described herein are particularly useful in combination with adult incontinence garments where the control of odors from bacterial by-products such as ammonia is highly desirable.
